an Apeks Flight regulator & octopus
could be yours

The lightest scuba regulator in the world...
 Apeks Flight is lighter than any other comparable regulator in the world. It is the most compact regulator Apeks has ever made - the Flight 2nd stage is approx. 20% smaller than the Apeks XTX range - perfect for the travelling scuba diver.
No-Tool Second Stage Removal... The unique, secure attachment of the second stage to the hose offers a quick removal without the use of any tools.
Unique Yoke Operation... The operation and design of the hand wheel prevents accidental snagging during a dive as it remains in the same

position whether it's open or clamped.
Lightweight Hose... The double braiding resists UV rays out of the water, extending the life of the hose. The hose is lightweight and extremely flexible but is also strong with a burst pressure more than twice that of most traditional hoses.
Tested Beyond Limits... Over one million breathing cycles prove its robustness and reliability. Rigorous and thorough tests have proven Flight will withstand limits beyond any that a diver would ever experience and it easily surpasses the European Authorities requirements for cold water use.

Each Flight regulator comes complete with a free light weight sport bag.
